

RES ONE™ ENTERPRISE

Create, automate and secure digital workspaces

A critical role of IT is supporting members of the workforce with the right access to apps, data and other technology needed to be productive. A worker's digital workspace, the place they go to access apps and services, is often their most important technology resource. But managing the needs of today's workforce and supporting their digital workspace has grown more complex for IT.

Most organizations struggle with:

- **Hybrid infrastructure and apps:** To support workers, IT departments have invested in varying amounts of virtual and cloud infrastructure and apps, but these new technologies are often still mixed in the legacy infrastructure and systems. Unfortunately, this complexity often impacts workers themselves.
- **Rising user expectations:** Tech-savvy workers yearn for an enterprise IT experience that is simple, easy, and similar to what they have at home. They want a seamless experience as they roam freely across different devices, delivery platforms and access a wide array of apps.
- **Effective protection from security risks:** Cyber threats have grown more sophisticated with their tactics. Perimeter-based security technologies fall short as cyber criminals target the trusted users in an organization.
- **Future-proofing for upcoming technologies:** IT must be in the position to make upgrades and add new technology to their environment easily, without disruption to the workforce.

These problems result in lost productivity, weaker security, poor compliance, user frustration and compromised business performance.

RES ONE Enterprise solves these problems and more by creating, automating and securing digital workspaces across hybrid environments. RES combines automation and self service with security capabilities in a single platform to empower today's agile workforce with the right access to apps and services.

RES creates dynamic, context aware workspaces that IT can centrally manage across hybrid environments. IT is empowered to deliver an optimized user experience because RES ONE Enterprise offers an open framework and flexible automation to maximize and unify existing technologies into a modern digital workspace. Because digital workspaces are managed centrally, RES future proofs environments against potentially disruptive changes like OS migrations, VDI upgrades, investments in cloud or other infrastructure initiatives

By following an approach that puts people at the center of IT, RES enables each worker with a context aware and secure workspace for maximum productivity.

RES ONE Enterprise is comprised of three tightly integrated products:

RES ONE Automation streamlines the management of complex hybrid environments by automating infrastructure, cloud and workspace processes required to support and deliver IT services to the business.

RES ONE Workspace centrally manages, secures and automates the workspace experience across even the most complex virtual and physical environments.

RES ONE Identity Director provides an attribute-based approach to identity and access management with automated provisioning, workflows and self-service.

Combined, this platform provides unmatched capabilities for managing today's ever-changing digital workspaces, including:

Common Uses for RES ONE Enterprise

Employee onboarding and offboarding

Make sure new employees have the digital workspaces they need on Day One—and that employees' IT access privileges are automatically deactivated the moment they are terminated by HR.

Protecting from Cybersecurity threats

ONE Enterprise offers a unique mix of context aware and policies controls that protect from both internal and external threats. Self-service and automation allow IT to mitigate risks, without sacrificing worker productivity.

Workspace modernization

RES ONE Enterprise is a perfect complement to VDI and other desktop modernization strategies, since it provides an automated, policy-based way of mapping individual workers to their digital workspaces. Operating system upgrades and other migrations are simplified and less disruptive to the workforce.

Compliance

RES ONE Enterprise helps IT provide enforce critical compliance policies around who is accessing what data systems. With complete tracking and logging, IT is able to reduce auditing headaches and get ahead of compliance risks.

- **A predictable experience across hybrid environments.** RES digital workspaces support the hybrid (physical, virtual and cloud) infrastructure and end-points. RES not only provides and optimized user experience, but also automates the processes that increase productivity and lower IT costs.
- **Policy-based automation, self-service and context awareness.** With RES, IT can ensure that everyone has the right resources, and only the right resources, in their digital workspaces.
- **A people-centric approach.** We focus on technology users and understand their needs for productivity, security and a positive technology experience. The results are dynamically-created digital workspaces that provide a predictable, secure and positive experience for everyone. RES anticipates needs and requests before they happen and delivers them as an automatic subscription.
- **Fast time to value.** RES solutions are up and running in days, not weeks or months, because of an intuitive management platform, automation and integration with popular applications, and out-of-the-box automated services.

SECURITY, AUTOMATION AND SELF SERVICE ARE KEY TO DIGITAL WORKSPACES

Strained IT teams relying on manual processes can have a negative impact on the user experience. Workers grow frustrated waiting for things they need to get their jobs done. Tech savvy workers are quick to find workaround to be productive, without realizing they are often creating vulnerabilities.

IT spends so much time reacting to requests and responding to risks that they have no opportunity to work on strategic initiatives or projects that support business objectives. IT needs to be able to quickly deliver the right access to the right apps and services so workers can be productive, while keeping the business secure. Current processes simply don't adequately support the workforce, and drain IT's valuable time.

Combining security, automation and self-service is key to empowering an agile workforce with modern digital workspaces. By following a people-centric approach, RES enables each worker with a context aware and secure workspace for maximum productivity. IT is able to support and secure the workforce, while saving time and reducing costs.

ABOUT RES

RES creates, automates and secures digital workspaces to improve the experience and productivity of the workforce while lowering IT costs. RES takes a people-centric approach to making technology access secure, even in complex multi-device/multi-location scenarios, across physical, virtual and cloud environments. RES boasts numerous patented technologies, fast time to value, and superior customer support for more than 2,500 companies around the world. For more information, visit www.res.com, contact your preferred RES partner, or follow updates on Twitter @ressoftware.
